

Technology Driven Art Consulting

Artwork Network's art consulting service can serve both large scale commercial projects and individual residential clients. Our professional, approachable style makes the process of selecting art enjoyable while our utilization of the latest technology saves you time and money.

Site Analysis

Client Questionnaire: We work with our clients to get your specific criteria, tastes and art preferences.

Site Analysis: We perform a specific, methodical analysis of your environment as a basis to our entire proposal.

Photographs: A consultant will come to your home or office to take photographs of specific locations being considered for art placement.

Measurements: We take measurements in order to determine the appropriate scale of artwork for each location.

Floor Plans: We obtain a floor plan of your space for art location identifications, which we use to generate our "Interactive Floor Plan". If you don't have formal floor plans of your space, we can also work from a sketch.

Budgeting: We make suggestions that meet your budget needs. We match art and artists that optimize budget as well as your environment.

Project Definition: We generate a detailed project scope so everyone knows exactly what is being proposed.

Technology driven, site specific.

Research & Recommendations

Custom Project Page: Our goal is to save you time and money by narrowing your art search virtually. We generate a custom project page that you can access via a private web link. This is our "Virtual Viewing Room" and it includes the following tools as described below: Online Inventory, Art Proposal Images and Interactive Floor Plans.

Online Inventory: We have an online inventory of art that includes thousands of detailed images and specifications. We add the proposed art work to your project page so you can learn more about each piece.

Art Proposal Images: We digitally scale and place artwork into photographs of each location so you can easily visualize it in your space!

Interactive Floor Plans: We specify art on an interactive floor plan. Simply roll your mouse over an image of the floor plan to view art proposed for that location.

In-Person Viewing Room: Once you have narrowed down your choices virtually, we invite you to our private viewing room to make final selections in person.

Commissions: We work directly with artists, craftsmen and architectural designers to develop and build site specific custom art installations.

Other Services

Framing: Our experienced on-site framer can craft custom frames to compliment your new or existing artwork.

Installation: Our professional installers can place, arrange and hang art in your space.

Collection Management: We can help you manage your current collection of art for insurance and asset management purposes.

Technology driven, site specific.
